

Lipoderma®

Welcome to the Community!

Dear Provider,

Welcome to the Lipoderma® community! We're honored to partner with practices that recognize a fundamental principle in aesthetics: healthy, youthful-looking skin depends on healthy underlying fat.

Across aesthetic medicine, patients increasingly present with changes that go beyond surface aging; thinning skin, loss of softness, reduced elasticity, and diminished tissue support. These changes may be seen with aging, metabolic shifts, or rapid weight loss, including GLP-1-associated weight reduction. In a world where fat is often viewed negatively, it's easy to overlook the essential role adipose tissue plays in supporting a naturally youthful appearance.

Lipoderma was developed to address this biology.

As a first-of-its-kind natural fat restoration solution, Lipoderma replaces “good fat” with “good fat,” helping restore the supportive foundation beneath the skin. Rather than simply adding volume, Lipoderma reinforces tissue architecture in a way that aligns with natural adipose function to support a natural, youthful look.

Thank you for joining a community that is redefining aesthetics by shifting the conversation from eliminating fat to restoring it where it matters most. We look forward to supporting your practice!

Warm regards,

The Britecyte Team
